The conduct of operations must ensure sound operational discipline that includes a robust procedure program with well written procedures. Process safety standards require it and when these procedures are well-written, they provide a consistent method for safely performing job tasks. They also establish a foundation upon which to continuously improve processes and safety, are an important element in quality improvement and change initiatives, and are an essential component of a comprehensive training program.

Maximize your performance by relying on a global expert.

The quality of your procedures directly impacts the quality of your performance. GP Strategies™ is an industry leader in procedure development. Our expertise enables us to help you develop and implement procedures throughout your organization. We can also help you upgrade existing procedures. Our solutions include the following:

- Process Safety Standards Assistance
- Operating Procedures Development
- Maintenance Procedures Development
- Procedure Upgrade Programs
- Supporting Materials

Access comprehensive expertise for developing operating procedures.

GP Strategies offers many services to develop thorough operating procedures that can be used for implementing plant launch applications, revising existing processes, supplementing facilities with limited documentation, and conducting decommissioning activities. Specifically, we assist with:

- Standard Operating Procedures
- Emergency Procedures
- Abnormal Procedures
- Startup and Shutdown Procedures
- Integrated Operating Procedures
- Consequence of Deviation (COD)

The employer shall develop and implement written operating procedures that provide clear instructions for safely conducting activities involved in each covered process consistent with the process safety information...

OSHA 1910.119(f)(1)
Remain compliant and safe with well-crafted process safety procedures.

GP Strategies works with you to develop regulatory compliance programs that apply to your operation. In addition, we also develop inspection and test plans based on a risk-ranking approach, inspection and test procedures, and nondestructive examination procedures. Our process safety procedure expertise includes the following:

- Process Safety Standards
- Mechanical Integrity Standards
- Inspection and Testing Procedures
- Quality Assurance Procedures
- Lockout/Tagout
- Safe Work Practices

Develop maintenance procedures that keep your operations running efficiently.

GP Strategies develops routine and preventive maintenance procedures to ensure that tasks are performed safely and efficiently. We also can develop work plans for maintenance activities that occur during outages and scheduled downtime to assist with planning the activity, minimizing downtime, and ensuring that safety and material compatibility issues have been considered. Our maintenance services include the following:

- Routine and Preventive Maintenance Tasks
- Troubleshooting Guides
- Work Plans
- Reliability Centered Maintenance

Assess and upgrade procedures for optimal performance.

Our subject matter experts work with you to assess all existing operations and maintenance procedures to rationalize and determine the quality of procedures from a human performance, compliance, regulatory, and integrity management perspective. We identify gaps and make recommendations on how to best manage existing procedures, including what changes may need to be made. Finally, we assist with improving existing procedures and develop new procedures. Our approach includes:

- Procedure Assessment and Rationalization
- Platform Determination and Template Design
- Procedure Upgrade Program Planning and Management
- Procedure Development

Count on us for supporting materials, too.

Additional supporting materials are often developed to be used in conjunction with procedures to improve their effectiveness. Our supporting materials include the following:

- System Descriptions
- Alarm Response Guides
- Job Aids
- On-the-Job Training Guides
